SPECTRUM 2000
SILICONIZED ACRYLIC LATEX CAULK

Manufactured to match Jamo Master Color™ Grout Colors. Siliconized caulk for use around sinks, tubs and showers and where tile meets tile or another surface such as where countertops meet backsplashes or floors meet walls. Maximum joint width and depth should not exceed 1/4" (6 mm). Do not use in areas with constant water exposure

Basic Use
To caulk around sinks, tubs, showers and countertops. To fill joints where tile changes plane or abuts another surface.

Limitations
For interior use only. Maximum joint width and depth should not exceed 1/4" (6 mm). Do not apply when temperatures fall below 45° F (7.2° C). Not for areas with constant water exposure. May stain porous surfaces such as walls. Masking or shielding of these areas might be necessary. Test in an inconspicuous area to see if staining will occur.

Directions
Surfaces should be clean, dry and free of all contamination. Knead tube with hands until soft. Cut tip off nozzle on a slant to desired opening size and squeeze into joint. Smooth with wet finger. Clean off excess caulk with soap and water before it cures.

Drying Time
1 hour before painting, 24 hours before exposure to water.

Cleaning
Clean tools and hands with water before material dries.

Colors & Texture
Colors that match the most popular Master Color™ Grout colors. Caulk colors approximate as nearly as possible the actual grout colors. Available in sanded and non-sanded texture.

Storage
Replace cap after each use. Store away from extreme heat or cold. Keep from freezing.

Caution
Keep out of reach of children. Do not take internally.
